

## Development and Data Science - full-time positions (Brussels, Luxembourg or Kaiserslautern)

### About CDC Cartel Damage Claims (CDC):

CDC is Europe's first mover and leading specialist in the enforcement of damage claims resulting from infringements of competition law. We run large, complex litigations enabling victims of cartels to recuperate damages. Committed to being innovators in legal tech and automation of treatment of documents and data, we use data science and statistics along with market research and legal argumentation to build strong cases. Our approach is pan-European and interdisciplinary, combining technical, legal and economic know-how. We understand that effective communication should be transparent and free of hierarchy and that job satisfaction is greatest when you can identify with the goals of the company. We are looking for an energetic team player who can bolster our capabilities for our Brussels, Luxembourg or Kaiserslautern office (your choice).

### Your responsibilities:

- Participate in design, development and implementation of applications for the collection and cleaning of data and evidence.
- Spark further improvements of our business processes.
- Provide technical direction and system architecture for individual initiatives.
- Maintain and support existing applications by diagnosing and troubleshooting issues for different applications developed with .Net technologies.
- Data cleaning and data visualisation with a view to quantifying the harmful effects of cartel behaviour.
- Communicate and build rapport with companies affected by competition law infringements.

### Requirements:

- Ability to think critically and creatively and to communicate thoughts clearly in English.
- Experience as front-end developer, including web design and development.
- Bachelor's degree or equivalent.
- Experience with each of the following: C#, HTML5, JavaScript, CSS3, Bootstrap, Angular (2+), JSON and REST services.
- Code branching merging and Software Configuration Management experience (SVN and/or Git).
- Familiarity with design patterns, including object-oriented (OO) design patterns, and coding best practices.
- Agile/Scrum delivery.
- Understanding of relational data models and able to create and maintain databases (Microsoft SQL Server).
- Experience with at least one of the following: Python, R, SAS, Stata, Julia, Tableau, advanced function of MS Excel, VBA, SQL, No-SQL, Java, Clojure.
- Interest in understanding the legal and business logic underlying our needs.

### Nice to have (but not required):

- Fluency in other languages widely spoken in the EU.
- Advanced knowledge of Windows or Linux operating systems, and the MS Office suite.
- Experience, education or interest in computer science, law, economics, business studies, math, statistics or machine learning.
- Master's degree or higher.
- Entrepreneurial spirit.

**What we offer:**

- A diverse field of activity in an international context.
- A competitive salary.
- Friendly and fun colleagues.
- An appreciative and recognising management culture.
- Mid-term: Flexible hours and the possibility to partially work remotely.

If you love learning and seeking challenges, we would love to receive your application:
